SUMMARY

AI Architect and Software Engineer with a focus on autonomous agent orchestration, adversarial machine learning, and high-scale distributed systems. Architected multi-agent platforms and Tier-0 payment systems processing **\$500M+ annually**. Expert in Rust, Python, and TypeScript, with a proven track record of building production-grade AI automation and real-time observability stacks.

EXPERIENCE

Visa Inc.

Austin, TX

Software Engineer – AI Platform & Payments

January 2024 – Present

- Architected AI-powered release automation platform using **LangGraph multi-agent orchestration** and MCP protocol; reduced release documentation time from **8 hours to 15 minutes** across **12+ production releases**.
- Built real-time transaction monitoring dashboard in **React 18** with TypeScript, leveraging React Query for server-state management and Recharts; adopted by **3 operations teams** to triage payment anomalies **40% faster**.
- Engineered Tier-0 B2B payment APIs using Java 17 and Spring Boot 3.4, processing **\$500M+ annually** with **99.99% uptime** and **sub-400ms P99** latency across distributed microservices with OAuth 2.0/JWT and Redis caching.
- Owned end-to-end CI/CD pipeline with SonarQube and Checkmarx SAST; deployed micro-frontends to Kubernetes via Module Federation, maintaining **zero critical CVEs** in production.
- Established observability stack (Prometheus, Grafana, ELK) with SLO-based alerting, reducing mean-time-to-detection by **60%** and enabling proactive issue resolution.

Visa Inc.

Austin, TX

Software Engineering Intern

May 2023 – August 2023

- Developed LSTM neural network using TensorFlow/Keras achieving **95% accuracy** in API anomaly detection, enabling real-time fraud alerts and outperforming statistical baselines by **20%**.
- Built model-evaluation UI in React with D3.js, enabling data scientists to compare ML model performance across datasets; reduced experiment review cycles by **30%**.
- Optimized high-traffic Java API endpoints handling **500+ TPS**, achieving **50% latency reduction** through query optimization and database indexing.

VIZIO Inc.

Dallas, TX

Software Engineering Intern – Embedded Systems

June 2022 – August 2022

- Engineered OTA firmware update system in C/C++ with delta patching and A/B partition failover, reducing update sizes by **70%** and boot times by **20%** across **19M+ devices**.
- Developed HAL interfaces and device drivers for ARM Cortex-M microcontrollers, implementing I2C/SPI/UART protocols for peripheral sensors and display controllers.
- Automated firmware builds across 15+ hardware SKUs using Docker and AWS CodePipeline, cutting release preparation time by **50%**.

PROJECTS

Agent-Redteam – Autonomous Adversarial AI Tester | Rust, Reinforcement Learning, ndarray

2025

- Built a high-performance adversarial engine in **Rust** to autonomously stress-test AI coding agents; implemented a **Neuroevolution Engine** using Genetic Algorithms for neural network-based attack optimization.
- Developed an **RL Synthesizer** utilizing Multi-Armed Bandits (UCB1) and Epsilon-Greedy strategies to evolve attack patterns, achieving a **35% increase** in vulnerability discovery rates.
- Engineered a parallel execution runner and a real-time WebSocket dashboard for live monitoring of adversarial sessions and attack payload synthesis.

CubeVision – Real-Time Rubik's Cube Solver | Python, OpenCV, NumPy, C++

2024

- Built computer vision system achieving **98% color detection accuracy** using HSV segmentation; implemented Korf's IDA* algorithm solving any cube state in under 20 moves.

EDUCATION

The University of Texas at Dallas

Richardson, TX

Bachelor of Science in Computer Science, GPA: 3.82/4.0, Dean's List

January 2022 – December 2023

Austin Community College

Austin, TX

Associate of Science in Computer Science, GPA: 3.95/4.0, Honors

August 2019 – December 2021

TECHNICAL SKILLS

AI/ML Architecture: Agentic Workflows (LangGraph, MCP), Reinforcement Learning, Neuroevolution, LSTM, LLM Security, TensorFlow, PyTorch

Languages: Rust, Python, Java, TypeScript, C/C++, Go, SQL, Bash

Systems/Infrastructure: Microservices, Kubernetes, Docker, AWS (Lambda, RDS, EC2), Kafka, Prometheus/Grafana

Backend/Frontend: Spring Boot, FastAPI, Node.js, React, Next.js, Redux, PostgreSQL, Redis, MongoDB
